

Product Summary

The GPL6206 series are a group of positive voltage regulators manufactured by CMOS technologies with high ripple rejection, ultra-low noise, low power consumption and low dropout voltage, which can prolong battery life in portable electronics. The GPL6206 series work with low-ESR ceramic capacitors, reducing the amount of board space necessary for power applications. The GPL6206 series consume less than 0.1µA in shutdown mode and have fast turn-on time less than 50µS. The series are very suitable for the battery-powered equipments, such as RF applications and other systems requiring a quiet voltage source.
